EDUCATIONAL BACKGROUND

University of Southern California Economics Ph.D.	Expected May. 2027
The Chinese University of Hong Kong, Shenzhen Economics MS	Sep. 2022 – May. 2023
Honors: Academic Scholarships (2023); Dean's List (2023); Presidential Award for Outstanding Graduate Students	
University of Wisconsin–Madison Econometrics and Quantitative Economics MS	Sep. 2020 – May. 2022
Honors: Academic scholarship (2021); Phi Kappa Phi (2022, Top 10%)	
Huazhong University of Science and Technology Economics Bachelor	Sep. 2016 – May. 2020

WORK EXPERIENCE

University of Southern California Teacher Assistant for The Financial Market	Sep. 2024 – Jun. 2025
➤ Supported instruction for an upper-level finance course covering asset pricing, bonds, options, and financial institutions ➤ Led exam review sessions and provided one-on-one support, translating theoretical models into applied problem-solving. Ensured grading consistency and clarity in collaboration with course instructor	
Shenzhen Public Housing Group Assistant in the Investment Department	July. – Sep. 2024
➤ Conducted comparative analysis of public rental housing systems in Singapore, Hong Kong, and the U.S. to support policy-oriented investment evaluation ➤ Analyzed risks in China's real estate sector with a focus on bank-financed public housing projects, including funding sources and sustainability ➤ Supported internal policy recommendations for affordable housing development and financial risk management	
China Merchants Bank Macroeconomic Researcher	Jan. – Apr. 2021
➤ Analyzed U.S. labor market indicators (non-farm payrolls, unemployment) under changing fiscal and monetary conditions to support internal macro outlook ➤ Monitored and summarized FOMC meetings and QE policy signals; correctly anticipated the Fed's accommodative policy shift in 2021 ➤ Assessed the macroeconomic impact of COVID-19 vaccination rollout on reopening and recovery timelines, incorporating supply capacity, distribution, and public adoption	

RESEARCH EXPERIENCE

University of Southern California Working Paper	Mar. 2025 – Now
Do Data Create Rents: Evidence from the U.S. Rental Market (with Rodney Ramcharan)	
➤ Study the impact of data-sharing platforms on market power and pricing in rental housing markets ➤ Construct granular panel data at the apartment–zipcode–time level ➤ Exploit the RealPage–LRO merger and COVID stimulus as quasi-exogenous shocks in an event study framework ➤ Document that platform dominance increases rental markups and strengthens price responses to demand shocks	
University of Southern California Under Submission	Jan. 2025 – Feb. 2026
Effects of Electric Vehicle Adoption on Urban Mobility (with Ruoyu Chen and Mingzhi Zhou)	
➤ Constructed ZIP code-level panel data in California combining traffic speed, vehicle registration, and transit ridership datasets ➤ Estimated the impact of BEV adoption on congestion using two-way fixed effects and county-by-year fixed effects models; found that doubling BEV adoption reduces peak-hour traffic speed by 1.2% ➤ Identified mechanisms including increased vehicle ownership, higher travel demand, and reduced public transit ridership	
University of Southern California Under Submission	Nov. – Mar. 2025
Exploring the Association Between Social Determinants of Health and Telehealth Utilization for ADHD Among Adults Using Machine Learning: A Cross-Sectional Study	
➤ Analyzed large-scale cross-sectional survey data using logistic regression and machine learning to identify key socioeconomic predictors, with applications to policy-relevant decision making ➤ Examine the association between SDOH and telehealth utilization for ADHD treatment among U.S. adults (age more than 18 years old) using machine learning (ML) to identify complex patterns that traditional methods may overlook, providing insights to inform equitable healthcare policies ➤ The final SVM model demonstrated notable capability in capturing complex data patterns. Principal Component Analysis (PCA) identified 16 principal components, with the top 10 components explaining approximately 80% of the variance	
University of Wisconsin–Madison Independent Researcher	Jul. – Nov. 2021

Unintended consequences of quantitative easing: Banks take more risks

Supervisor: Jeffrey Smith, Professor; Matthew Wiswall, Professor; Charles Engel, Professor,

- Analyzed U.S. bank-level data from WRDS to study the impact of QE on bank risk-taking behavior
- Applied PSM-DID methods to identify heterogeneous effects across banks with different MBS exposures
- Findings highlight increased risk-taking following QE1, with implications for financial stability and regulation

SKILLS:

Econometrics: DID, Event Study, IV, Panel FE, Time Series

Programming & Data: Python, Stata, R, SQL, Bloomberg, WRDS

Languages: English (Fluent), Chinese (Native)
